### USPSTF 2021 Updated Recommendations

#### Lung Cancer Screening

**Who?**
- Adults 50 to 80 years of age
- At least 20 pack-year smoking history
- Currently smoking
- Quit smoking within the past 15 years
- Asymptomatic and well enough to undergo curative intent surgery

**Stop**
- Once patient has not smoked for 15 years
- Develops a health problem that significantly limits life expectancy or ability to undergo curative intent surgery

**What?**
- Annual low-dose chest computed tomography (CT)
- Shared decision-making about screening
- Tobacco cessation treatments for those currently smoking
- Structured CT reporting (eg, Lung-RADS)
- Nodule follow-up algorithms

**Updates**
- Expanded age range and smoking history
