

Does OSA Treatment With CPAP Have Effects on the Metabolic Syndrome (MS) Reversibility and the Associated Parameters (TREATOSA-MS)?

STUDY DESIGN

Randomized, placebo-controlled
trial in MS and moderate to severe OSA

CPAP
(n = 50)

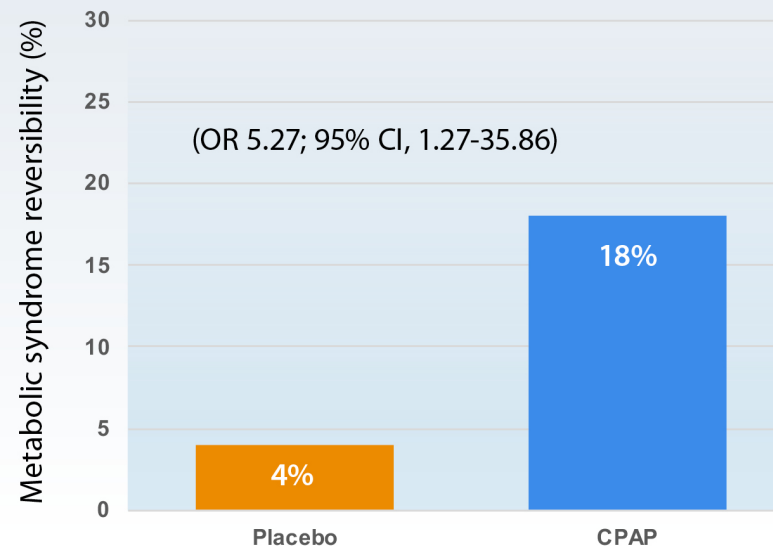

VS

PLACEBO
(nasal strips)
(n = 50)

RESULTS

After 6 months, most patients kept MS diagnosis, but the **rate of MS reversibility** was higher in CPAP group

Despite the higher rate of MS reversibility after CPAP therapy as compared with placebo, most patients still have this diagnosis.
